Re: South Cavalcade Superfund Site, Groundwater Fate and transport Evaluation
Report, Your Letter, August 5, 1997

Dear Mike:

We approve subject report; however, we disagree with one conclusion. On page 63 the last sentence of the first bullet states, "These findings indicate that other processes, such as biodegradation, are in-fact acting to retard the migration.." We do not agree that Beazer has demonstrated this as fact. At this time we believe it is hypothesis. In any event we agree with you that Beazer and EPA should proceed to develop a work plan for the verification activities proposed in the report.

We would like to meet with Beazer to establish the data quality objectives for this work plan sometime after September 15, 1997. Our belief is this work plan would fit into the current Remedial Action Work Plan (RAWP). More specifically we believe the actives Beazer proposes are within the scope of the existing "Groundwater Extraction System Performance Monitoring Plan" (GESPMP) Sections 2, 3, 4 and 5. Consequently, we believe that this work plan could replace those sections and maintain continuity with the existing RAWP. Please call me at (214) 665-8523 to set a meeting date and answer any questions.

Sincerely,

GLENN CELERIER, P.E.
PROJECT MANAGER
